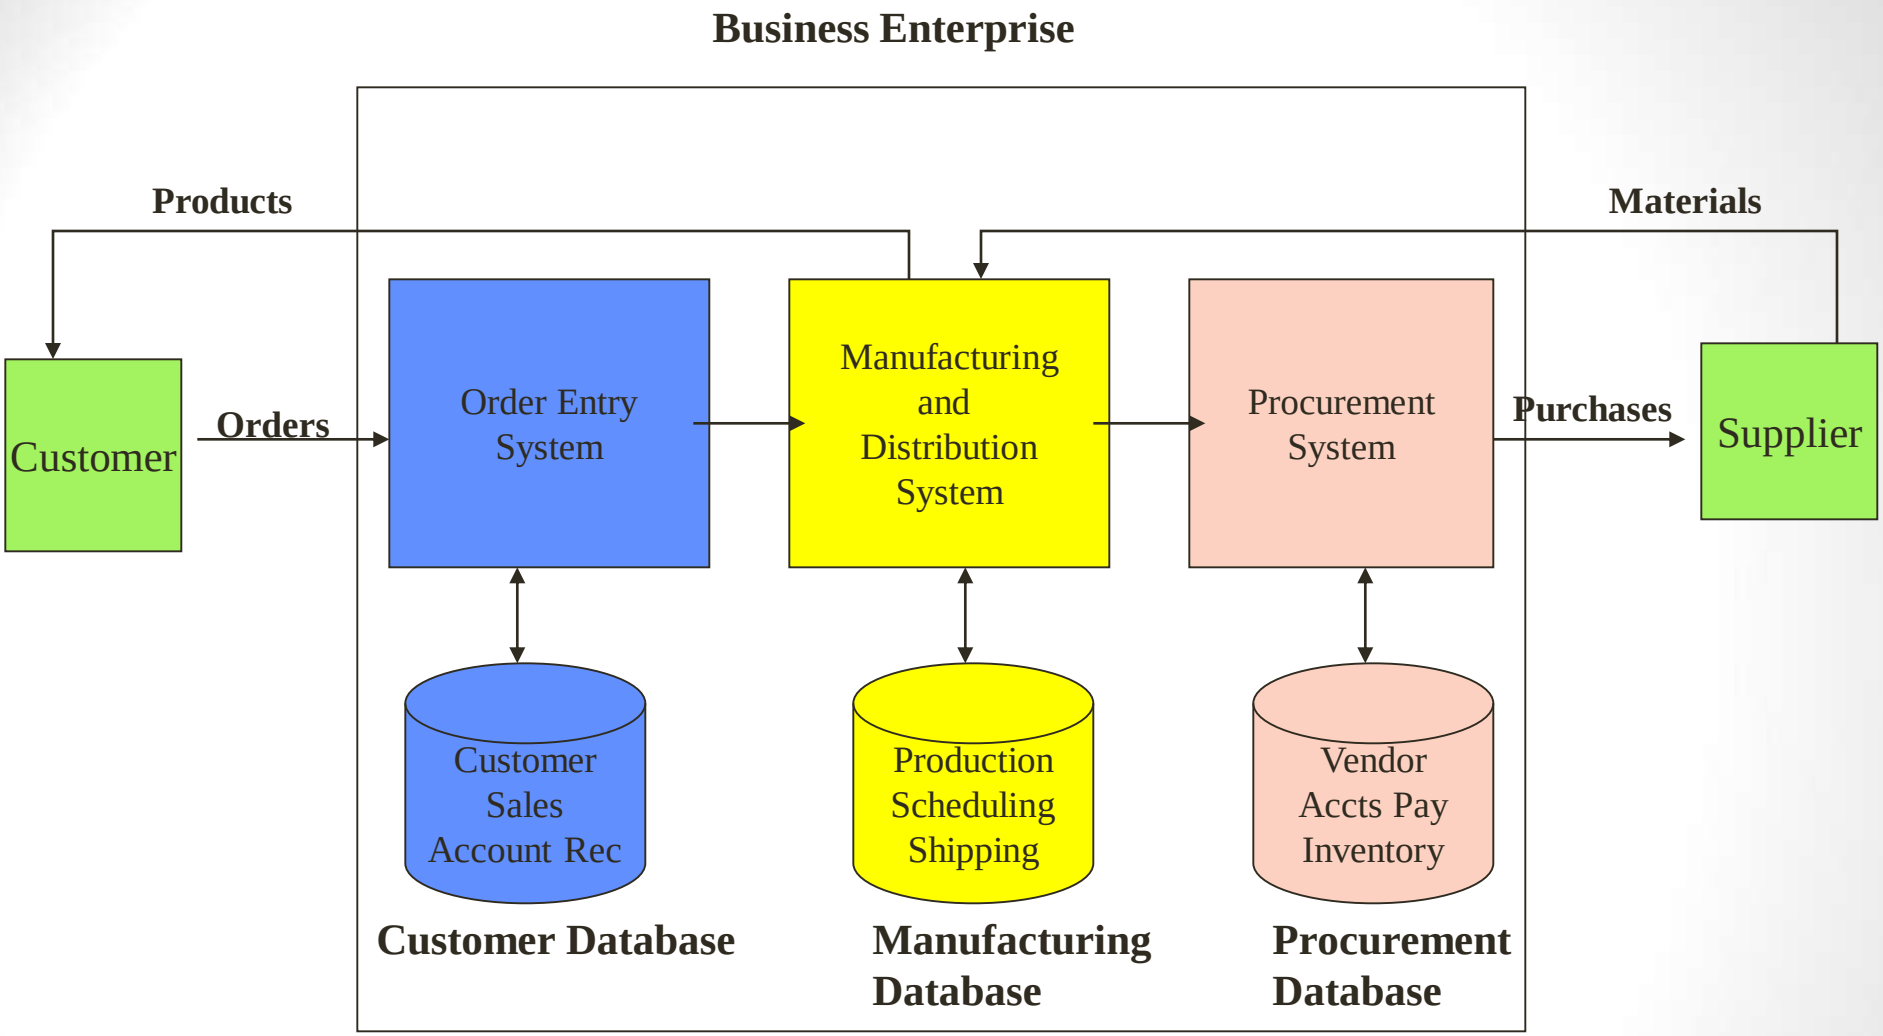
MACO ONLINE PORTAL
Enterprise Resource Planning

Computerized Accounting

Introduction

- An effective system combines elements into an architecture, or design, that is flexible, cost-effective, technically sound, and able to support the information needs of the business.



Traditional Information System with Closed Database Architecture

Why is ERP?

An Enterprise Resource Planning System (ERP) is a software package that supports the traditional “back-office” functions of finance, manufacturing and distribution.

Those activities supported by multi-module application software that help a company manage the important parts of its business in an integrated fashion.

ENTERPRISE SYSTEMS
